

MY COLLEGE PROJECT

My name is Valeria Pascacio Rodriguez, I am currently in my sixth semester of computer science at CONALEP plantel 027, I am excited about what will happen in the following months of my course at the university.

For a long time I have had a great interest in the area of technology, so I have decided to continue my studies in the career of Computer Systems Engineering. I have always considered myself a curious person, knowing the emergence and advancement of new technologies is something that fascinates me, where it originates and how electrical devices really work.

This career represents for me the opportunity to develop professionally in a field that is constantly evolving and has a direct impact on the future of our society.

In addition to taking certain basic concepts of computing, I believe that the knowledge of this career can be applied in different fields of work that are related to technology, in the future I would like to contribute something to my community and provide support to others as they have done with me.

My Plan A is to enter the **Instituto Tecnológico de la Costa Grande** in Zihutanajeo, to study this engineering, since I consider that it is an institution with a good academic level and that it will provide me with the necessary tools to achieve my goals. Currently I do not have a defined Plan B, since I am focused on preparing myself as best as possible to achieve this goal.

I am committed to continue studying and training to become a capable and professional person.

I would like to show how grateful I am to my sponsors for being a source of support and help to continue my studies, for taking the opportunity to support and change someone's life positively, and to the foundation for being the ones who manage to create these connections and present new opportunities to the students of Zihuatanejo.

Sincerely,

Valeria Pascacio Rodríguez
